

# The Sustainable Public Procurement programme of the 10-Year Framework of Programmes on Sustainable Consumption and Production (10YFP SPP programme)

---

## Vision Document

22 September 2015

### What is the 10YFP programme on Sustainable Public Procurement (SPP)?

It is an evolving set of activities formulated and implemented by a global platform that supports the implementation of SPP around the world under the global mandate of the 10 Year Framework of Programmes. It brings together a variety of SPP stakeholders to foster communication, leverage resources and achieve common objectives. The 10YFP on SPP is striving to create and maintain a significant hub for exchange and cooperation driving the implementation of Sustainable Public Procurement (SPP) worldwide. The programme includes activities aiming to integrate SPP appropriately in the post-2015 development agenda, when it is agreed.

### What is the vision of the 10YFP on SPP?

Our vision is a world in which environmental, economic and social aspects of sustainability are embedded in public procurement and associated supply chains, with full support of governments worldwide.

### What is the programme's purpose?

- **Build the case for SPP** by improving knowledge on SPP and its effectiveness as a tool to promote sustainable consumption and production, and supporting greener economies and sustainable development.
- **Support the implementation of SPP** on the ground through increased collaboration, better access to capacity building tools, and support through SPP experts.

### What are the programme's goals for 2024?

At least a third of national governments have designed and initiated or strengthened SPP policies, including all three dimensions of sustainability in a comprehensive manner, with integration into broader SCP and sustainable development strategies.

A significantly larger number of decision makers, procurers and other relevant stakeholders are conscious of the benefits of implementing SPP; are supported by institutional, legal and policy frameworks conducive to SPP; have the capacity to implement SPP; and have access to easy-to-use tools.

Cooperation between SPP stakeholders is greatly improved; knowledge on SPP is shared through appropriate information and capacity building tools; innovative solutions are put forward to address the main barriers to SPP.

SPP is monitored and its sustainability impacts are measured and communicated.

SPP is appropriately integrated in the post-2015 development agenda, when it is agreed.

SPP is contributing to the creation and nurturing of markets for sustainable products and services.

### **What does the 10YFP SPP programme bring to the table?**

- The global mandate of the 10YFP on Sustainable Consumption and Production patterns inherited from the Rio+20 summit;
- a vast, diverse and growing network of experienced stakeholders around the globe;
- an already up-and-running programme with clear governance rules and an ambitious work plan.
